Procurement Engineer

Summary

Our team at Global Petromac Project L.L.C, where I've been contributing as a Procurement Engineer for over a year, leverages my expertise in offshore oil and gas operations to enhance proposal preparation and project execution. With a solid foundation in mechanical engineering from APJ Abdul Kalam Technological University, my skills have been honed through practical experience, starting as a Graduate Engineering Trainee at Steel and Industrial Forgings Ltd. At the core of my competencies is the ability to navigate the complexities of the oil and gas sector, ensuring that our projects meet stringent industry standards and client expectations.
